SUMMARY

Quantitative Researcher and Developer with expertise in systematic trading, Smart Money Concepts (SMC), derivatives markets, and quantitative finance. Experienced in developing and backtesting algorithmic trading strategies across equities, futures, and options using Python, statistical modeling, and time-series analysis. Possess a strong understanding of market microstructure, liquidity, order flow, market structure, and options analytics, with the ability to translate discretionary trading concepts into data-driven, rule-based trading systems. Skilled in financial data engineering, portfolio optimization, and AI-powered research automation, with a strong interest in alpha generation, systematic investing, and quantitative research.

WORK EXPERIENCE

Quant Researcher and Developer Intern | **StockWiz Technologies LLP** *May 2026 – Present*

- Researched and developed systematic trading strategies using historical market data and quantitative techniques.
- Built Python-based backtesting and data analysis pipelines to evaluate strategy performance and risk metrics.
- Conducted research on technical indicators, factor models, and options strategies for generating trading signals.
- Automated financial data collection, preprocessing, and research workflows using Python and SQL.
- Collaborated on developing scalable, data-driven solutions for quantitative research and strategy development.

Data Analyst Intern | **Visual Solutions Pvt. Ltd.** *May 2025 – September 2025*

- Developed an investment analysis model to identify funding and sectoral allocation patterns, improving analytical insights by 15%.
- Produced investment trend reports using historical data analysis to support data-driven strategic decisions.
- Designed data pipelines and dashboards for analyzing financial and business datasets.

AI/ML Intern | **Dreamteam Technologies** *May 2024 – July 2024*

- Designed and implemented an NLP-based chatbot, reducing average response time by 30%.
- Applied sentiment analysis and machine learning techniques to improve intent classification and response accuracy.
- Developed data preprocessing and model evaluation pipelines using Python.

PROJECTS

RAG-LLM Backtesting Engine | *Python, Transformers, LLMs, RAG*

- Developed an AI-powered backtesting engine that converts natural language trading strategies into executable backtesting workflows.
- Built a Retrieval-Augmented Generation (RAG) pipeline for strategy retrieval, parameter extraction, and financial knowledge management.
- Designed a scalable architecture using PostgreSQL and vector search to support quantitative research and strategy automation.

Research Report Automation System | *Python, FastAPI, PostgreSQL, NLP*

- Built an end-to-end automated research platform that generates financial reports from structured and unstructured market data.
- Implemented data ingestion, news analysis, and PDF report generation pipelines to automate investment research workflows.
- Reduced manual research effort by automating data collection, analysis, and report creation.

Black-Scholes Option Pricing Model | *Python, Streamlit, Quant Finance Concepts*

- Developed a production-grade option pricing system implementing the Black-Scholes framework for European options.
- Computed implied volatility and option Greeks (Delta, Gamma, Theta, Vega, and Rho) with Monte Carlo validation.
- Built an interactive Streamlit dashboard for option pricing, sensitivity analysis, and risk visualization.

TECHNICAL SKILLS

Programming Languages	Python, SQL, C++ (Basic)
Quantitative Libraries	NumPy, Pandas, Polars, SciPy, Statsmodels, Scikit-learn, PyTorch, VectorBT, TA-Lib
Data Engineering & Databases	PostgreSQL, QuestDB, MongoDB, PyArrow, Apache Kafka, Apache Airflow, Hadoop, ETL Pipelines, Data Warehousing
Algorithmic Trading & Research	Alpha Research, Systematic Trading, Algorithmic Trading, Backtesting, Signal Generation, Factor Research, Portfolio Construction, Performance Attribution, Transaction Cost Modeling
Financial Markets	Equities, Futures & Options, Market Microstructure, Smart Money Concepts (SMC), Order Flow Analysis, Volatility Analysis, Options Pricing, Options Greeks, Risk Management
Quantitative Methods	Time Series Analysis, Statistical Modeling, Regression Analysis, Forecasting, Optimization Techniques, Monte Carlo Simulation, Probability & Statistics, Stochastic Processes, Feature Engineering
Machine Learning & AI	Supervised Learning, Unsupervised Learning, Neural Networks, Predictive Modeling, NLP, Transformer Models, Retrieval-Augmented Generation (RAG), Financial AI Applications
Frameworks & Tools	FastAPI, Streamlit, Git, Docker, Linux, Jupyter Notebook, Power BI, Excel
Financial Concepts	Portfolio Theory, CAPM, Sharpe Ratio, Factor Investing, Risk-Return Modeling, Asset Allocation, Performance Analytics
Soft Skills	Analytical Thinking, Problem Solving, Research Mindset, Communication, Collaboration, Attention to Detail

EDUCATION

Bachelor of Technology in Computer Science and Engineering (Data Science) 2022 – 2026

Jodhpur Institute of Engineering and Technology (JIET) · Jodhpur, Rajasthan

Relevant Coursework: Probability & Statistics, Machine Learning, Time Series Analysis, Optimization Techniques, Financial Engineering, Database Management Systems, Data Mining, Linear Algebra, Calculus, Numerical Methods
